

Manship School Survey of Public Reactions to Coronavirus in Louisiana June 8, 2020

The LSU Manship School Survey of Public Reactions to Coronavirus in Louisiana examines how the public in Louisiana has reacted to the spread of the novel coronavirus in the state, including its adherence to public health recommendations, reactions to government policy responses to the pandemic, experiences with the coronavirus and concerns looking ahead. This survey provides a unique systematic analysis of public reaction to the novel coronavirus spread and its economic implications.

Many Louisianans continue to experience hardship, know someone directly harmed by outbreak

A large percentage of Louisiana residents know someone who has suffered from the novel coronavirus or its economic impact. Forty-two percent say they personally know someone who has tested positive for COVID-19, and 23% know someone who has died from complications related to the disease. Most Louisiana residents (58%) personally know someone who has lost a job or income because of the outbreak.

We find significant differences between Black and White people in their likelihood of knowing someone who has tested positive for COVID-19 or died from complications related to it. Approximately half of Black Louisiana residents (49%) know someone who tested positive for the disease, while 39% of White residents do. Forty percent of Black residents know someone who has died from complications related to COVID-19; the share among White respondents is 17%.

More than one-in-four Louisiana adults (28%) say they have lost income from their job or business because of the coronavirus outbreak. A similar share (22%) say they have lost their job or had their hours reduced without pay because of the outbreak. In all, nearly one-third of state residents (30%) have experienced either loss of job or loss of income during the pandemic.

More than one-in-eight Louisiana adults (14%) have tried to apply for unemployment in the past two months. Although most were able to complete the application, 17% of applicants were unable to do so.

A similar share (13%) of state residents have fallen behind on rent or mortgage payments because of the coronavirus. Nearly one-fifth (18%) had to cut the size of meals or skip them entirely because they did not have enough food.

About a quarter (24%) have been unable to get medical care for conditions or concerns not related to the coronavirus, and 10% have been unable to get prescription medication. Five percent have lost their health insurance.

Many Louisiana residents remain at home; most say they wear face coverings when out

In May, 71% of state residents say they have stayed home instead of going to work, school or other regular activities during the previous two weeks. This is a decline from our April [survey](#), when 81% of these same respondents said they had stayed home during the pandemic. Similarly, the share saying they have only left home for essential services such as food, medicine and health care fell from 80% to 73%. Readers should use caution when comparing responses from this second wave of our survey (May) to results reported for the first wave (April) because some respondents to the earlier wave did not return for our second wave. Topline difference, therefore, may result from a change either in the sample or in behavior and attitudes over time. However, to avoid this pitfall, we test for change throughout this report by comparing responses in the second wave of the survey to responses in the first wave for *only those individuals who participated in both*.

We also asked respondents how often they left their home in the past two weeks specifically for each of the following reasons:

1. To work
2. To attend religious services or other ceremonies such as funerals or weddings
3. To attend a social gathering or visit friends
4. To get groceries
5. To pick up medications and other health necessities
6. To go to a doctor or other medical appointments
7. To pick up food from a restaurant
8. To care for a friend or family member
9. To exercise outdoors (for example, walk, ride bike, hike, jog)
10. To walk pets or bring pets to veterinarian
11. To help someone get necessary supplies
12. For any other reason

We combined responses to items that fall outside the governor's now expired stay-at-home order (items 2, 3 and 12) and calculate that 45% of Louisiana adults say they have never left home for these reasons during the previous two weeks – down slightly from 52% in April. Another 33% say they leave home for these reasons only once a week or less. Approximately one fifth of Louisiana residents now report they are leaving home multiple times a week for reasons that were previously in violation of the stay-at-home order.

As more Louisiana residents leave their homes, 45% say they always wore a face covering over their nose and mouth when outside the home during the past two weeks. Another 17% say they cover their face very often when outside the home. The combined share who say they either always or very often cover their faces when outside the home (62%) is an increase from April when only 48% said they wore a face covering very often or always. Meanwhile, the share of people saying they maintain at least 6 feet of distance from other people when outside the home has held steady at 80% in May and 82% in April.

Louisiana residents think they are complying with public health recommendations more than neighbors are

While 71% of state residents say they have stayed home except for essential services, only 65% say that most other people in their community have done so. Only 32% of respondents believe most people in their community cover their faces always or very often when outside of the home – versus the 62% who describe themselves that way. Likewise, 40% of respondents say most people maintain 6 feet of distance very often or always when out of their homes, but twice as many describe their own behavior that way. Sixty-nine percent say they very often wash their hands for at least 20 seconds each time, but just 26% think most people in their community do so.

Most Louisiana residents are uncomfortable with many activities outside the home

A majority of state residents say, at this time, they are *uncomfortable* getting on an airplane (77%), going to a large sports or entertainment event (75%), eating out at a restaurant (60%), going to a barber shop or hair salon (56%), and going to a retail clothing store (54%).

At the same time, a majority of state residents are *comfortable* going to a grocery store (67%), going to parks (63%) and visiting friends (58%).

They split more evenly when it comes to going to a workplace outside their home (48% comfortable; 52% uncomfortable) and going to the beach (48% comfortable; 51% uncomfortable).

Most support continued restrictions and wearing masks, but partisan gaps emerge

Most Louisianans (59%) believe the United States and Louisiana should continue measures to slow the spread of the coronavirus, such as stay-at-home orders and social distancing, even if it means that businesses remain closed.

To measure support for these policies, we modified a question from [national polling by the Kaiser Family Foundation](#), to apply to Louisiana. We asked respondents which of the following statements comes closer to their view:

- The U.S. and Louisiana should continue measures to slow the spread of the coronavirus, even if that means many businesses will have to stay closed; or
- The U.S. and Louisiana should ease up on measures to slow the spread of the coronavirus soon, in order to get the economy going again, even if that means more people would get coronavirus and could die.

Democrats and Republicans split over reopening. Most Democrats (89%) support continuing restrictions even at an economic cost, while most Republicans (68%) support easing restrictions for the sake of the economy even if it comes at a health cost.

Thirty percent of state residents say they would be willing to follow strict social distancing guidelines and limitations of activities for more than six months. Another 12% say they would be willing to do so for between four and six months, and 26% said for between one and three months.

Eighteen percent say they would be willing to comply for less than a month and 14% say they would not be willing to comply at all for any length of time.

Even more state residents (76%) say that wearing masks or other face covering when around others is the responsible thing to do. Still, a significant minority (24%) say that wearing a mask around others is an unnecessary burden.

Although not as wide as for continuing restrictions on activities, there is a 30 percentage point partisan gap in saying that masks are responsible – 93% of Democrats and 63% Republicans. Nevertheless, majorities of both parties say covering one's face when around others is the responsible thing to do.

Black and White respondents express different levels of concern for health and economic risks

Overall, many Louisiana residents continue to worry about a variety of health and economic risks of the outbreak:

- 62% worry they or someone in their family will get sick from coronavirus.
- 52% worry the state's health care system will be overrun, and people will not be able to get needed medical care.
- 56% worry there will not be enough personal protective equipment for health workers to protect themselves.
- 48% worry their local hospital will run out of necessary equipment like beds or ventilators to treat patients.
- 77% worry local businesses will close permanently because of revenue loss during the outbreak.
- 77% worry the national economy will head into a recession because of the coronavirus pandemic.

There are several racial differences in the degree of worry about the pandemic. For example, Black Louisianans are more worried than White residents that:

- They or someone in their household will get sick from the coronavirus (68% among Black respondents and 58% among White respondents).
- The state's health care system will be overrun and people will not be able to get care (61% among Black respondents and 45% among White respondents).
- Health care workers will not have necessary personal protective equipment (65% among Black respondents and 49% among White respondents).
- Local hospitals will run out of necessary equipment to treat patients (64% among Black respondents versus 38% among White respondents).

However, economic concerns are more prevalent among White respondents. White Louisianans are more worried than Black residents that:

- Local businesses will close permanently because of revenue loss during the outbreak (82% among White respondents and 64% among Black respondents).

- The national economy will head into a recession because of the coronavirus pandemic (81% among White respondents and 65% among Black respondents).

Put another way, the share of Black residents worried about the impact of the pandemic is similar whether considering health or economic impacts (consistently in the range of 61% to 68%), while Whites tend to express less worry about health concerns (38% to 58%) than economic concerns (81% to 82%).

However, both Black and White respondents express a similar (and more modest) level of worry about the direct impact on their own job or income (33% among Black respondents and 31% among White respondents).

Split over future of outbreak

Louisianans remain closely divided in their beliefs about the future of the pandemic in the state: 54% say the worst is behind us and 46% say the worst is yet to come. There is a large partisan gap in these perceptions. Eighty percent of Republicans say the worst is behind us, while 69% of Democrats say the worst is yet to come.

More approve of state and local response than federal response

Forty-three percent of Louisiana residents approve of the federal government's handling of the coronavirus outbreak. Larger shares approve of the state government response (61%) and their local government response (58%).

Louisianans trust public health officials and doctors the most for reliable information on the coronavirus: 70% have a great deal or fair amount of trust in the federal Centers for Disease Control & Prevention (CDC); 76% trust the Louisiana Department of Health (LDH); and 91% trust their own doctors. Most Louisianans also trust Governor Edwards (70%) for information about the virus. Forty-seven percent trust President Donald Trump for reliable information. Nearly two-thirds of Louisianans (64%) trust their local news, but only 49% trust the national news for information about coronavirus.

Methodology

This is the second wave of a two-wave panel survey, that is, a survey that interviews the same individuals repeatedly at multiple points in time.

[Dr. Michael Henderson](#), Director of LSU's Public Policy Research Lab, and [Dr. Martin Johnson](#), Kevin P. Reilly Sr. Chair in Political Communication and Dean of the Manship School, designed the survey instrument, replicating some items from the Kaiser Family Foundation's national polling on the impact of coronavirus, and analyzed the results.

Data collection was conducted by YouGov, an organization that conducts innovative online polling for a variety of clients, including CBS News, the Economist and the New York Times.

[Research from scholars at Harvard University and Tufts University](#) shows that well-designed online opt-in sampling techniques, like those YouGov uses for its surveys, perform as well as traditional Random Digit Dialing telephone polls.

This survey was fielded between May 20-June 1, 2020. Initial respondents for the first wave of the survey (fielded April 15-28, 2020) were selected from YouGov and two other online panels. These are opt-in panels, which are open for anyone to join after a double-opt-in process. YouGov removed duplicate Louisiana respondents across panels by scraping macro-data geolocation, IP address, cookies, zip code and demographics.

YouGov interviewed 1,053 eligible respondents for the first wave; 1,004 were then matched down to a sample of 1,000 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race and education based on known characteristics of Louisiana residents using the 2018 American Community Survey (ACS).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined, and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The second wave of the survey has a re-interview response rate of 76%, meaning 757 of the initial 1,000 in the first wave returned to take the second wave.

The weights for second wave responses were post-stratified on 2016 Presidential vote choice, and a four-way stratification of gender, age (4-categories), race (4-categories) and education (4-categories), to produce the final weight.

The margin of error for the second wave is 5.1%.

The survey was funded by philanthropic support from the Kevin P. Reilly Sr. Chair in Political Communication held by Dr. Martin Johnson.

Q31w2. Which comes closer to your view?

	The U.S. and Louisiana should continue measures to slow the spread of the coronavirus, even if that means many businesses will have to stay closed.	The U.S. and Louisiana should ease up on measures to slow the spread of the coronavirus soon, in order to get the economy going again, even if that means more people would get coronavirus and could die.	N
